

1.

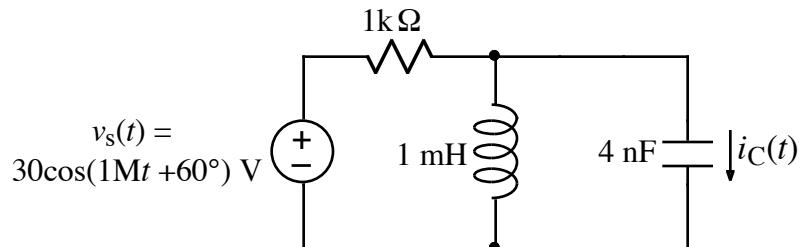

Given $\omega = 50 \text{ k rad/s}$, find z_{ab} .

2.

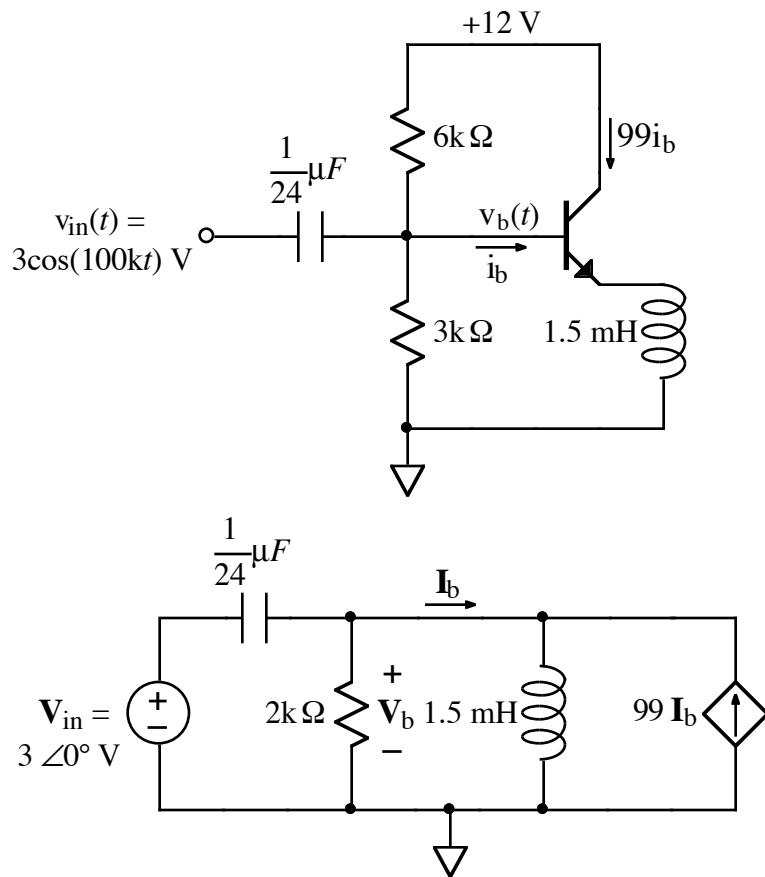

Find a frequency, ω , that causes z_{ab} to have a phase angle of -45° , (i.e., imaginary part is the negative of the real part). Hint: use admittance, (the reciprocal of impedance).

3.

- Find the phasor value for $v_s(t)$.
 - Draw the frequency-domain circuit diagram, including the phasor value for $v_s(t)$ and impedance values for components.
4. Find the phasor value for $i_C(t)$.

5.

The above circuit diagrams show an emitter-follower amplifier and its high-frequency equivalent circuit. Find $v_b(t)$.
