ECE/CS 3710
Forming Teams
Due Tuesday September 22nd

For the project portion of the course you will form teams of three or four people. You will find it helpful to have a mix of backgrounds in your group (some CE, ECE, and CS) with individual strengths in areas such circuits, digital design, computer architecture, assembly language programming, PC hacking, Verilog programming, etc.

In addition to the team members, please also list 2 or 3 ideas that you have for customizing your processor to a particular application. These are clearly preliminary ideas and you are not committed to implement them, but you need to begin brainstorming about what types of things you might do to extend your project! You only need to turn in one form per team.

List the members of your team (three or four people), team member email addresses, and the background areas in which each member is strong. If you like, also let us know what you'd like to call your team.
